Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This row of five two-story, two-bay wide houses late Italianate-style brick houses with shed roofs and wooden scroll-sawn bracketed cornices were built in the late 1880s. Three of the houses retain their original brick facades, which were always painted; the other two have been covered with formstone.

The houses are two stories in height, 12' wide and occupy lots 50' deep. Each house is two rooms deep and there is no backbuilding. The houses are constructed in running bond and were originally painted. Each house has a single hooded chimney located at the rear corner of the house. The shed roofs are capped by a wooden cornice consisting of a crown molding supported by three long scroll-sawn brackets decorated with grooves, connected by a lower molding strip, and ending with a distinct trefoil pattern. The frieze panel, which also serves as ventilation for the attic, is decorated with a row of butterfly-like shapes, created with a jig saw. Two rectangular, jig-sawn panels further decorate the brick frieze area framed by the long brackets and the lower molding strip.

The tall, narrow window and door openings have splayed brick lintels and wood sills. All windows are filled with modern 1/1 replacement sash. An original double-light doorway transom survives at 2217, but no original doors remain. The houses sit on low basements, lit by a single-light sash. Each house is reached by one concrete step.

8. Significance

Period	Area of significance	check one & justify		
<input type="checkbox"/> prehistoric	<input type="checkbox"/> archeology-prehistoric	<input checked="" type="checkbox"/> community planning	<input type="checkbox"/> landscape architecture	<input type="checkbox"/> religion

Builder/Architect

Prepare both a summary paragraph of significance and a general statement of history and support.

This group of late-Italianate-style houses is significant in that it represents the level of architectural stylishness achieved by many builders of small street houses in the late nineteenth century.

The houses were built according to a pattern that was quite common to the city's working class neighborhoods of the period 1870 to 1910. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and northeast of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide two-story houses on the main streets, and smaller, 11' to 13'-wide two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell for \$1,200 to \$1,500; small street houses for \$700 - \$900. Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties. In this way people of varying means could afford to live in the same block. If they couldn't afford the approximately \$750 purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

The land originally belonged to the Patterson family as part of their 18th century estate, which also included the land given by the family to the city for Patterson Park. In the late 1860s the Patterson heirs began developing this block by leasing parcels to builders who sold most of the houses to mainly German-American semi-skilled tradesmen and laborers employed in nearby factories, who received mortgages from a variety of local building and loans, many of them sponsored by the German community.
